Module 01: Systems in Family

Learning Objectives

1. Define **Systems** within the context of Family.
2. Analyze how Systems interacts with other components of the Active Inference framework.
3. Apply specific constraints of Family to the formal definition of Systems.

Introduction

This module explores **Systems**. In the **Family** curriculum, we approach this topic with a focus on specific applications and theoretical depth appropriate for the audience. Systems is a critical component of the 8-part Active Inference spine, bridging the gap between [Previous Topic] and [Next Topic].

Key Concepts

1. Systems as a Markov Blanket Boundary

How does Systems define the boundary between the agent and the environment?

2. Generative Models of Systems

What parameters involved in Systems must be optimized to minimize variational free energy?

3. Active Inference Dynamics

How does the process of Systems drive the perception-action loop?

Applications

In Family, we see Systems manifest in: * **Specific Example 1**: [Add domain-specific example here] * **Specific Example 2**: [Add domain-specific example here]

Conclusion

Understanding Systems allows us to better model complex adaptive systems. In the next module, we will expand on this foundation.
