

Module 01: Systems — The Digital Neighborhood

Learning Objectives

1. Understand that the **Internet** is a System of connected computers.
2. Learn about **The Network** (The invisible wires connecting us).
3. Know that the Digital World is like a Real Neighborhood (Be safe!).

Introduction: The Invisible Web

Imagine a spider web that connects every house in the world. If you pull a string here, it jiggles over there. The Internet is a web of information. When you send a message, it travels through the web to your friend. You are part of a Global System.

Key Concepts

1. The Network (Connection)

Your tablet is not alone. It is talking to the Wi-Fi. The Wi-Fi is talking to the Router. The Router is talking to the World. This chain of talking is called a **Network**.

2. The Cloud (Other People's Computers)

Where do your photos go? "The Cloud." But the Cloud is just a building full of big computers (Servers). It's like a library that never closes.

3. Digital Safety (Stranger Danger)

Would you open your front door to a stranger? No. The Internet has doors too.

- Don't talk to strangers.
- Don't share your address.
- If something feels weird, tell a parent.

Activities

Activity 1: The String Telephone

Take two cups and a long string. Poke a hole in the bottom. Connect them. Pull the string tight. Talk into the cup. Can you hear? This is a simple Network!

Activity 2: Draw the Web

Draw your house. Draw your friend's house. Draw the lines connecting them. Draw the "Data Packets" (Messages) traveling on the lines.

Summary

The Internet is amazing, but it is a big place. By understanding the System, we can explore it safely.
