

Lab: Scratch Jr. (My First Code)

Goal

To write a real computer program using blocks.

What You Need

- A tablet with Scratch Jr. (Free App).
- Or use MIT Scratch on a computer.

Steps

1. Choose a Sprite

Pick a character (Cat, Dog, Rocket).

2. Make it Move

Drag the "Move Right" block. Drag the "Jump" block. Connect them like Lego. Tap the flag. Does it move?

3. Add a Loop

Put the "Repeat Forever" red block at the end. Now your character dances forever!

Discussion

- Did the computer do exactly what you told it?
- What happens if you put the blocks in the wrong order?
- You just wrote code!

What We Learned

Coding is creative. It is like painting with logic.
