

Lab: Scenario Planning Workshop

Objectives

Learning Goal: Apply the Active Inference planning framework to construct scenarios, evaluate strategies, identify trigger signals, and build organizational resilience.

Part 1: Define the Planning Horizon (5 min)

Element	Your Organization
Industry	
Typical product/service cycle length	
Appropriate planning horizon	
Justification for this horizon	

Write your response here

Part 2: Identify Key Uncertainties (10 min)

List the 4–6 most important uncertainties facing your organization over the planning horizon:

#	Uncertainty	Range of Outcomes	Impact (H/M/L)	Controllable?
1				
2				
3				
4				

Write your response here

Part 3: Construct 3 Scenarios (20 min)

Build three coherent scenarios combining your key uncertainties:

Scenario A: Continuation (most likely)

Element	Description
Key assumptions	
What stays the same	
What changes incrementally	
Implications for your org	

Scenario B: Disruption (challenging)

Element	Description
Key disruption	
What changes fundamentally	
Winners and losers	
Implications for your org	

Scenario C: Transformation (radical)

Element	Description
Key transformation	
New paradigm	
What becomes obsolete	
Implications for your org	

Write your response here

Part 4: Evaluate Current Strategy (10 min)

Test your current strategy against all three scenarios:

Metric	Scenario A	Scenario B	Scenario C
Strategy remains viable? (Y/N)			
Prediction error (H/M/L)			
Required adaptation			
Time to respond			

Write your response here

Part 5: Trigger Signals and Contingencies (10 min)

For each scenario, identify early warning signals:

Scenario	Trigger Signal	Where to Monitor	Current Status	Contingent Action
A (continuation)				
B (disruption)				
C (transformation)				

Write your response here

Part 6: Resilience Assessment (5 min)

Rate your organization's resilience:

Capacity	Score (1-5)	Evidence
Absorptive (withstand shock)		
Adaptive (modify approach)		
Transformative (reinvent)		

Write your response here

Summary

Component	Finding
Planning horizon	
Biggest uncertainty	
Scenario requiring most adaptation	
Most urgent trigger signal to monitor	
Resilience weakness	
Recommended strategic action
