

Lab: Shared Mental Model Mapping

Objectives

Learning Goal: Surface, compare, and align the mental models held by individual team members.

Part 1: Individual Model Elicitation (10 min, independent)

Each team member independently answers these questions about the current project/challenge:

Question	Your Answer
What is the primary goal?	
Who are the key stakeholders?	
What are the biggest risks?	
What does "success" look like?	
What are our key assumptions?	

Write your response here

Part 2: Model Comparison (15 min, group)

Compile individual responses side by side:

Question	Member 1	Member 2	Member 3	Member 4	Alignment?
Primary goal					H/M/L
Key stakeholders					
Biggest risks					
Success criteria					
Key assumptions					

Where is alignment highest? Where is divergence greatest?

Write your response here

Part 3: Divergence Analysis (10 min)

For each area of significant divergence:

Topic	Nature of Disagreement	Source (different info? different interpretation?)	Resolution Needed?
			Y/N

Write your response here

Part 4: Model Alignment (15 min, group discussion)

For critical divergences, reach shared understanding:

Topic	Aligned View	Remaining Uncertainty	Action to Resolve

Write your response here

Summary

Finding	Detail
Areas of strong alignment	
Areas of productive divergence	
Areas of problematic misalignment	
Key model update agreed upon
