

Practice Quiz: Digital Transformation — Module 05:

Action

Name: ____ Date: ____

Part A: Multiple Choice

1. Tesla's manufacturing experience shows that optimal automation is: A) Maximum B) Hybrid — balancing machine precision with human flexibility C) Minimum D) Full lights-out
 2. The best automation candidates are processes that are: A) Creative and unpredictable B) High volume, rule-based, stable, and error-sensitive C) Low volume and complex D) Human-facing
 3. The **rigidity-agility trade-off** means automation: A) Is always rigid B) Increases efficiency but reduces the organization's ability to adapt to novel situations C) Is always agile D) Has no trade-offs
 4. **RPA** (Robotic Process Automation) is best for: A) Complex judgment B) Rule-based, repetitive tasks that follow clear procedures across multiple systems C) Creative work D) Strategy decisions
 5. Process automation changes human work by: A) Eliminating all jobs B) Shifting human work toward exception handling, oversight, and tasks requiring judgment C) Creating more routine work D) Having no effect
 6. An **automation pilot** should focus on: A) The biggest process B) A high-impact, manageable process that demonstrates value and generates learning C) Everything at once D) The cheapest process
 7. The **total cost of ownership** of automation includes: A) Just software licenses B) Implementation, maintenance, exception handling, monitoring, and change management costs over the system's lifecycle C) Just hardware D) Just labor savings
-

Part B: Short Analysis

1. A finance team spends 40% of their time on invoice processing. Design an automation strategy: what to automate, what to keep human, what pilot to run, and what success metrics to track.
2. Your automated order fulfillment system handles 95% of orders perfectly but creates expensive problems for the 5% that don't fit standard rules. Design a "human-in-the-loop" solution.
3. Compare the automation ROI of three different processes in your organization. Rank them by automation readiness and recommend a sequencing strategy.
