

Lab: Design Your Own System

Goal

Today you are an inventor! You will think of a system and draw how its parts work together.

What You Need

- Paper
- Crayons, markers, or colored pencils
- Your imagination!

Steps

1. Choose Your System

Pick one idea:

- A **Space Rocket**
- A **Robot Helper**
- A **Garden**
- Or make up your own!

2. Draw the Parts

Draw your system. Make sure you show the different parts.

- If it's a Garden, draw the flowers, the dirt, the sun, and the watering can.
- If it's a Robot, draw its metal arms, its battery, and its computer brain.

3. Draw the Edge

Draw a big circle or line around your system to show what is **Inside** and what is **Outside**.

4. Show the Helping

Draw arrows to show how the parts help each other. (Example: Sun --> Flower)

My System Story

*

Write your response here

* Tell us about your system. What does it do? Who are the parts?

What We Learned

Question	My Answer
What is my system's name?	
What are two parts of my system?	
What does my system do?
