

Lab: The Planning Maze

Goal

Use your brain to plan a path before you move!

What You Need

- Paper and markers
- Small toys (like a LEGO figure or a coin)

Steps

1. Build the Maze

Draw a simple maze on a piece of paper. Or build one on the floor using books and pillows! Put a "Treasure" (like a cookie) at the end.

2. The Robot Mode

Pretend to be a robot that CANNOT PLAN. Walk into every wall. "Bonk!" Is this faster or slower? (Slower! And it hurts!)

3. The Planner Mode

Now, stand at the start. Don't move your feet. Use your eyes and brain to find the path. "Go straight, turn left, then turn right..."

4. Execute

Walk the path you planned. Did you hit any walls? No! Planning saves time and bumps!

My Planning Log

*

Write your response here

* Path 1 (No Plan): Number of bumps: [Number] Path 2 (With Plan): Number of bumps: [Number]

What We Learned

Question	My Answer
Why is planning better than bumping?	
Did you feel like Nutty the Squirrel?
