

Module 03: Perception — The Pattern Detective

Learning Objectives

1. Understand that **Perception** means noticing Patterns.
2. Learn about **Sequences** (Red, Blue, Red, Blue...).
3. Know that your Brain loves to predict "What Comes Next?"

Introduction: The Pattern Detective

Detective Brain is looking for clues. She sees a fence: **Tall, Short, Tall, Short...** "Aha!" says Detective Brain. "I know what comes next! A **Tall** one!" This is called a **Pattern**. Perception is not just seeing things; it is seeing the *Order* of things.

Key Concepts

1. Visual Patterns

Patterns are everywhere!

- **Stripes:** Black, White, Black, White (Zebra).
- **Shapes:** Circle, Square, Circle, Square. Your eyes collect the clues, and your brain finds the rule.

2. Number Patterns

Numbers have patterns too.

- 1, 2, 3, 4... (Add 1).
- 10, 9, 8, 7... (Subtract 1).
- 2, 4, 6, 8... (Skip counting!). If you know the pattern, you can count really fast.

3. Rhythm Patterns (Music)

Close your eyes and listen. *Clap, Clap, Stomp. Clap, Clap, Stomp.* Your ears hear the pattern. You know exactly when to Stomp!

Activities

Activity 1: Fruit Kebab

Get some fruit (Grapes and Strawberries). Make a pattern on a stick: **Grape, Berry, Grape, Berry...** Eat them in order. Does the taste have a pattern too? (Sour, Sweet, Sour, Sweet).

Activity 2: Dance Moves

Create a movement pattern. **Jump, Spin, Clap.** Do it again: **Jump, Spin, Clap.** Ask a friend to copy you. Can they predict what comes next?

Summary

Perception helps us make sense of the world by finding Patterns. Whether it is colors, numbers, or music, noticing the Rule helps us predict the future!
