

# Lab: Number Hopscotch

## Goal

To use your whole body to explore the Number System.

## What You Need

- Chalk (for outside) or masking tape (for inside).
- A stone or beanbag per player.

## Steps

### 1. The Grid

Draw a Hopscotch grid on the ground. Boxes numbered 1 to 10. Some single boxes (1 foot), some double boxes (2 feet).

### 2. The Toss

Throw your stone into Box 1. If it lands outside, you miss your turn! (Precision!)

### 3. The Jump

Jump through the boxes: 2, 3, 4... up to 10. Don't step in the box with the stone! Pick up the stone on your way back.

### 4. The Count

You must say the number out loud as you land on it. "One! Two! Three!"

## My Action Log

| Round   | Highest Number Reached | Did I fall?        |
|---------|------------------------|--------------------|
| Round 1 | 4                      | Yes (Lost balance) |
| Round 2 | 8                      | No (Good balance!) |

## What We Learned

Hopscotch teaches us Balance, Aim (Precision), and Counting all at once. Your body learns where the numbers are in space!
