

Lab: Symbol Factory

Goal

To Create your own number system (Symbols) and use them to communicate.

What You Need

- Paper and markers.
- A partner.

Steps

1. The Design

Invent new symbols for numbers 1, 2, and 3.

- Example:
- $1 = \$\star\$$ (Star)
- $2 = \$\Delta\$$ (Triangle)
- $3 = \$\square\$$ (Box)

2. The Message

Write a math problem using YOUR symbols.

- $\star + \Delta = ?$

3. The Decode

Give it to your partner. Can they solve it? They have to use the "Key" (The list you made in Step 1). Answer: $\star (1) + \Delta (2) = \square (3)!$

My Symbol Log

Number	My New Symbol
One	
Two	
Three	

What We Learned

Symbols only work if everyone agrees on what they mean. That is why we all learn the same numbers in school!
