

Practice Quiz: The Robot Brain

Part A: Pick the Best Answer

1. What is an Algorithm? A) A type of music B) A step-by-step list of instructions (Like a Recipe) C) A robot dance D) A battery
2. How does a robot decide what to do? A) It guesses B) It uses If-Then Logic (Rules) C) It flips a coin D) It asks its mom
3. Finish the Code: **IF** it is dark, **THEN**... A) Turn on lights B) Eat lunch C) Run fast D) Sing
4. Can a robot feel sad? A) Yes, if it watches a sad movie B) No, it is a machine with no feelings C) Only on Mondays D) Maybe
5. What happens if the code has a "Bug" (Mistake)? A) The robot works perfectly B) The robot might crash or do the wrong thing C) The robot becomes human D) Nothing
6. Who is smarter? A) A Calculator (Fast math) B) A Human (Creativity, Feelings, Ideas) C) A Rock D) A Shoe
7. Why are Loops useful? A) To make robots dizzy B) To repeat a job many times without getting tired C) To look like a circle D) They aren't

Part B: Tell Us What You Think

1. Write a simple algorithm for "Putting on Shoes" (Step 1, Step 2...).
2. If you could program a robot to do one chore, what would it be?
3. Why is it important to give robots the right instructions?
