

Lab: Invent a Sport

Goal

To design a System by creating Rules and Boundaries.

What You Need

- A ball (or sock ball).
- A bucket or basket.
- Something to mark lines (Tape, Shoes, Rope).

Steps

1. The Goal

"Get the ball in the bucket."

2. The Constraints (Rules)

Add 3 rules to make it hard/fun.

- Rule 1: You must stand behind the shoe line.
- Rule 2: You must throw UNDER leg.
- Rule 3: If you miss, you do 3 jumping jacks.

3. The Play Test

Try to play! Is it too easy? (Move the line back). Is it too hard? (Make the bucket bigger).

4. The Name

Name your sport. (e.g., "Sock-ket-ball").

Discussion

- Did the rules create the fun?
- How did you decide what was fair?
- You are a System Designer!

What We Learned

Games are just systems we invent to challenge our brains and bodies.
