

Module 03: Perception — Reading the Room

Learning Objectives

1. Understand that **Perception** means noticing what is happening in the game.
2. Learn about **Social Cues** (Is my friend happy or sad?).
3. Know that a good player gathers data with their Eyes and Ears.

Introduction: The Detective

A game is full of clues.

- Where is the ball?
- Is your teammate shouting for a pass?
- Is your opponent tired? To win the game, you have to be a Detective. You have to **Read the Room**.

Key Concepts

1. Social Signals (The Hidden Language)

People send signals all the time.

- **Smile + Laugh:** They are having fun.
- **Frown + Quiet:** They might be sad or bored.
- **Red Face + Clenched Fists:** They are ANGRY. (Red Alert!). If you miss the signals, the game might stop being fun.

2. Tone of Voice (Data in Sound)

"Nice job!" can mean two things.

1. "Nice job!" (Happy voice) = They mean it.

2. "Niiice job..." (Sarcastic voice) = They think you messed up. You have to listen to the *music* of the voice, not just the words.

3. Joint Attention (Looking Together)

When you point at a bird, your friend looks at the bird. This is **Joint Attention**. In a game, you look where the ball is going. Great teams look at the same goal.

Activities

Activity 1: The Statues

Play "Red Light, Green Light." But look at the LEADER's eyes. If they are looking away -> Move! If they are looking at you -> Freeze! You are perceiving their Attention.

Activity 2: Tone Twisters

Say the phrase "I like apples" in different ways:

- Happy.
- Angry.
- Sad.
- Scared. Can your partner guess which one it is?

Summary

Perception is more than seeing. It is understanding the feelings and intentions of the people around you.
