

Lab: The Ultimate Board Game

Goal

To design and build a playable board game.

What You Need

- A big piece of cardboard or paper.
- Markers.
- Coins or small toys (as players).
- One die (or a spinner).

Steps

1. The Path

Draw a path from START to FINISH. Make it winding!

2. The Spaces (The Logic)

Color the spaces. Add Special Rules:

- Red Space: "Go back 2 spaces." (Penalty).
- Green Space: "Go forward 1 space." (Reward).
- Blue Space: "Sing a song." (Action).

3. The Test

Play it with your family. Is it too short? Make the path longer. Is it too mean? Remove some Red Spaces. You are the Game Master!

Discussion

- Did your rules work?
- Did you have to clarify something during the game?
- Writing clear rules is hard!

What We Learned

We are all Designers. We can change the game if we work together.
