

Practice Quiz: Learning

Part A: Multiple Choice

1. What is the primary role of **Learning** in Active Inference? A) To maximize reward B) To minimize variational free energy C) To increase entropy D) To eliminate the Markov Blanket
2. In Middle School, Learning is best described as: A) A static property B) A dynamic process C) An external state D) A random variable
3. Which mathematical quantity is most central to Learning? A) The Lagrangian B) The expected free energy C) The surprisal D) The precision
4. How does Learning relate to the concept of the Generative Model? A) It is separate from the model B) It is a component of the model C) It destroys the model D) It is only relevant for the environment
5. A failure in Learning would likely result in: A) Perfect prediction B) Generalized surprise C) Immediate death of the agent D) Zero entropy
6. Which scale is most relevant for analyzing Learning in this course? A) Quantum B) Neural C) Social D) All of the above
7. Learning connects directly to which other component? A) The step before it B) The step after it C) Both A and B D) None of the above

Part B: Short Answer

1. Explain how **Learning** facilitates the minimization of prediction error.
2. Provide a concrete example of Learning failing in a Middle School scenario.
3. How would you model Learning using a POMDP (Partially Observable Markov Decision Process)?
