

Lab: Learning Loop Audit and Design

Objectives

Learning Goal: Audit your organization's learning loops, diagnose learning failures, and design improvements.

Part 1: Learning Loop Inventory (15 min)

Document the learning loops that currently exist in your organization:

Loop	Cadence	Trigger	Participants	What Gets Updated	Effectiveness (1-5)
Operational					
Tactical					
Strategic					
Transformative					

Write your response here

Part 2: Learning Failure Diagnosis (15 min)

Identify two specific instances where your organization failed to learn:

Failure 1: _____

Dimension	Analysis
What happened?	
What should have been learned?	
Why wasn't it learned? (Select: superstitious learning / competency trap / defensive routines / learning myopia)	
What model should have updated?	
What prevented the update?	

Failure 2: _____

Dimension	Analysis
What happened?	
What should have been learned?	
Why wasn't it learned?	
What model should have updated?	
What prevented the update?	

Write your response here

Part 3: Single-Loop vs. Double-Loop Assessment (10 min)

For a current strategic challenge, compare how your organization would address it through each approach:

Current challenge: _____

Approach	Response	What Changes
Single-loop		Parameters only (budgets, targets, tactics)
Double-loop		The underlying model (assumptions, strategy, business model)

Which approach is your organization defaulting to? Which is more appropriate?

Write your response here

Part 4: Design an Improved Learning System (20 min)

Choose one area where your organization's learning is weakest and design an end-to-end system:

Design Element	Specification
Learning objective	
Data/signal to capture	
Collection mechanism	
Analysis process	
Cadence	
Who participates	
How model is updated	
How updates are propagated	
How effectiveness is measured	

Write your response here

Summary

Component	Finding
Strongest learning loop	
Weakest/missing learning loop	
Primary learning failure mode	
Recommended improvement
