

# Practice Quiz: Strategic Modeling — Module 02:

## Agents

Name: \_\_\_\_ Date: \_\_\_\_

---

### Part A: Multiple Choice

1. Stakeholder modeling under Active Inference is: A) Listing stakeholders B) Building generative models of other agents' beliefs, preferences, and likely actions C) Survey research D) Customer segmentation
  2. Netflix's advantage over Blockbuster was primarily: A) Better technology B) A fundamentally different generative model of customer needs C) More stores D) Lower costs
  3. "Theory of mind" in strategy means: A) Psychology B) Modeling how competitors model you, creating recursive strategic inference C) Mind reading D) Intellectual property
  4. A customer under Active Inference is: A) A target B) An inference agent with their own generative model who actively senses and evaluates options C) A demographic profile D) A revenue source
  5. Competitor blind spots are strategically valuable because: A) They make competitors lazy B) They represent areas where the competitor's model is incomplete, creating opportunities C) They are unethical to exploit D) They are temporary
  6. "Recursive modeling" in strategy means: A) Using recursion in code B) I model what you're likely to do, which depends on what you model I'm likely to do C) Repeating analysis D) Following patterns
  7. Marketing under Active Inference is: A) Advertising B) Aligning the firm's signals with the customer's generative model of their needs C) Persuasion D) Data collection
-

## Part B: Short Analysis

1. Select a real competitor and construct a four-quadrant analysis: capabilities, intentions, assumptions, blind spots. Based on this analysis, identify one strategic opportunity.
2. Your organization's customer model assumes price is the primary purchase driver. But recent data suggests customers are increasingly motivated by sustainability. Analyze this model mismatch and design a strategy to align with the actual customer model.
3. A new competitor has entered your market with an approach that doesn't make sense under your current strategic model. Rather than dismissing them, use the stakeholder modeling framework to build a model of their model. What do they believe that you don't?
