

Practice Quiz: Digital Transformation — Module 07: Communication

Name: ____ Date: ____

Part A: Multiple Choice

1. Disney's MagicBand creates value through: A) Wearable technology B) Omnichannel coherence — the same customer identity and experience across physical, digital, and wearable touchpoints C) Data collection D) Theme park access
 2. **APIs** function as organizational communication because: A) They connect computers B) They define what data passes between systems and what stays private — the communication protocol of the digital organization C) They're technical D) Developers use them
 3. Digital collaboration tools (Slack, Teams) change organizations by: A) Replacing email B) Reducing hierarchy, enabling parallel conversations, creating searchable organizational memory, but risking overload C) Being faster D) Costing less
 4. **Omnichannel communication** requires: A) Many channels B) A unified model of the customer/stakeholder maintained consistently across all touchpoints C) Expensive technology D) A marketing team
 5. The paradox of digital communication is: A) It's expensive B) More channels can create more noise and fragmentation rather than better understanding C) It's unreliable D) It's too fast
 6. An API design decision about what data to share is: A) Technical only B) A boundary management decision — what crosses the Markov blanket between systems C) Trivial D) Irrelevant
 7. **Channel proliferation** becomes a problem when: A) There are too many B) People can't find the right information across multiple overlapping channels, decreasing organizational signal quality C) Channels are expensive D) IT objects
-

Part B: Short Analysis

1. Your organization uses email, Slack, Teams, Zoom, a wiki, and three internal tools. Employees report "tool fatigue" and can't find information. Diagnose the communication architecture problem and design a rationalized channel strategy.
2. Design an omnichannel customer communication architecture for a bank that serves customers through branches, app, website, phone, and ATM. How do you maintain model coherence across touchpoints?
3. Your organization's two critical backend systems communicate through a fragile, undocumented API. Analyze the organizational risk and design an API governance approach.
