

Lab: Pattern Maker

Goal

Create your own patterns and see if a friend can solve (perceive) them!

What You Need

- Colored beads, Lego bricks, or markers
- A friend (or parent)
- Paper and pencil

Steps

1. The Creator

You are the Pattern Maker. Make a sequence using colors or shapes, but LEAVE THE END EMPTY.

- Example: **Red, Blue, Red, Blue, _____**

2. The Solver

Ask your friend: "What comes next?" If they put the right one, they found the rule! If they put the wrong one, they were surprised!

3. Tricky Patterns

Make it harder with different pattern types:

- **AB**: Red, Blue, Red, Blue, Red, Blue...
- **AAB**: Red, Red, Blue, Red, Red, Blue...
- **ABC**: Red, Blue, Green, Red, Blue, Green...
- **AABB**: Red, Red, Blue, Blue, Red, Red, Blue, Blue...

4. Pattern Detective

Now switch roles! Your friend makes a pattern and YOU have to figure out the rule. Write down the rule you think it is before guessing.

5. The Surprise Round

Make a pattern that starts normal but then BREAKS the rule. (Red, Blue, Red, Blue, Red, YELLOW!) Watch your friend's face when the pattern breaks. That is the Surprise!

My Pattern Log

Write your response here

* The trickiest pattern I made was: ____ The pattern I couldn't solve was: ____

My Pattern	The Rule	Did They Solve It?

What We Learned

Question	My Answer
Which pattern type was hardest to guess?	
What did your friend's face look like when the pattern broke?	
How does your brain figure out the rule?
