

Lab: Build a Junkyard Bot

Goal

To build a model Robot System using recycled materials ("Junk").

What You Need

- Empty boxes (cereal, shoe, tissues).
- Toilet paper rolls (Actuators/Arms).
- Bottle caps (Sensors/Eyes).
- Glue or Tape.
- Markers.

Steps

1. The Design (Planning)

Think about what your robot does.

- Is it a Chef Bot? (Needs hands).
- Is it a Car Bot? (Needs wheels).

2. The Build (Systems)

- **Body:** Use a big box.
- **Head:** Use a smaller box.
- **Sensors:** Glue bottle caps for eyes.
- **Actuators:** Glue rolls for arms or legs.

3. The Details

Draw buttons for the **Computer Brain**. Draw a **Battery Pack** on the back.

My Robot Log

Robot Name	Job	Special Part
Example: Chef-O-Matic	Cooking	Spoon Hands
My Bot:		

What We Learned

Even a cardboard robot is a system! It has parts represented by the junk. Real engineers do this same thing with metal and circuits.
