

Module 06: Learning — Growing Together

Learning Objectives

1. Understand that **Learning** means updating your brain (Model).
2. Learn that **Mistakes** are just Surprise (Data) that helps us learn.
3. Know that the whole family is always learning (even Mom and Dad!).

Introduction: The Construction Zone

Your brain is always under construction.

- Babies build "Walking highways."
- Kids build "Reading towers."
- Parents build "Cooking bridges." Learning is hard work! It takes energy and practice. But it is the most exciting "Action" a family can do.

Key Concepts

1. Surprise (The Teacher)

In Active Inference, we learn when we are Surprised.

- You thought the stove was cold -> Ouch! (Surprise) -> You learned it is hot.
- You thought the joke was funny -> Nobody laughed (Surprise) -> You learned to tell it differently. Surprise isn't bad. It is a lesson.

2. Mistakes are Magic

Everyone hates being wrong. But a mistake is just a signal: "Update Required!"

- Did you spill the milk? (Update: Hold cup tighter).
- Did you forget your homework? (Update: Pack bag at night). Don't hide mistakes. Use them!

3. Updating the Model

When we learn, we change our minds.

- Old Model: "Vegetables are yucky."
- New Data: *Tries roasted carrots.* "Yum!"
- Updated Model: "Some vegetables are good." Flexible brains are happy brains.

Activities

Activity 1: The "Yet" Game

Whenever someone says "I can't do it," add the word **YET**.

- "I can't tie my shoes... YET."
- "I can't ride a bike... YET." This magic word opens the door to learning.

Activity 2: Mastery Museum

Find something you used to be bad at but are good at now.

- A drawing from last year?
- An old video of you walking? Show it off! "Look! I updated my model!"

Summary

Families grow by learning. We embrace surprise, celebrate mistakes, and always keep our brains open to updates. We are growing together every day.
