

# Module 08: Planning in Embodied

## Learning Objectives

1. Define **Planning** within the context of Embodied.
2. Analyze how Planning interacts with other components of the Active Inference framework.
3. Apply specific constraints of Embodied to the formal definition of Planning.

## Introduction

This module explores **Planning**. In the **Embodied** curriculum, we approach this topic with a focus on specific applications and theoretical depth appropriate for the audience. Planning is a critical component of the 8-part Active Inference spine, bridging the gap between [Previous Topic] and [Next Topic].

## Key Concepts

### 1. Planning as a Markov Blanket Boundary

How does Planning define the boundary between the agent and the environment?

### 2. Generative Models of Planning

What parameters involved in Planning must be optimized to minimize variational free energy?

### 3. Active Inference Dynamics

How does the process of Planning drive the perception-action loop?

## Applications

In Embodied, we see Planning manifest in: \* **Specific Example 1:** [Add domain-specific example here] \* **Specific Example 2:** [Add domain-specific example here]

## **Conclusion**

Understanding Planning allows us to better model complex adaptive systems. In the next module, we will expand on this foundation.
