

Lab: Target Practice

Goal

See how your brain learns to aim better with practice!

What You Need

- A crumpled paper ball
- A "Target" (a wastebasket or a circle drawn on paper on the floor)

Steps

1. The First Throw

Stand far back. Close one eye. **Predict:** "I will hit the target!" **Action:** Throw the ball. **Result:** Did you hit it? Or did you miss? (Too far? Too short?)

2. The Surprise

If you missed, your brain is Surprised. "Oops! Too hard!" Your brain is **Learning** and fixing the map of "How hard to throw."

3. Try Again

Throw it again. Did you get closer? That's learning! Keep trying until you hit it 3 times in a row.

4. The Trick

Now... take a step back. Throw it. Miss! (Surprise!) You have to learn a new map for the new distance.

My Learning Log

*

Write your response here

* Throw 1: [Hit/Miss] -> My brain thought: [Throw Harder/Softer] Throw 2: [Hit/Miss]
Throw 3: [Hit/Miss]

What We Learned

Round	Did I hit the target?	What did I change?
1		(Too soft? Too hard?)
2		
3
