

Lab: The Sorting Detective

Goal

To practice making **Systems** (Groups/Sets) by sorting messy things.

What You Need

- A messy pile of small toys (Lego, cars, beads, buttons).
- 3 Bowls (or circles drawn on paper).

Steps

1. The Chaos

Dump the toys on the floor. It is a mess! It has no System.

2. The Rule

Captain Brain needs to make a rule. **Rule:** "Sort by Color."

- Bowl 1: Red things.
- Bowl 2: Blue things.
- Bowl 3: Yellow things.

3. The Sort

Use your Agent Hands to move the items. Are there any "Tricky" ones? (Maybe a green one?)
Put them in a "Mystery Pile."

4. New Rule

Dump them out again. **New Rule:** "Sort by Size." (Big vs. Small). Does the System look different now?

My System Log

Rule Used	How many piles?	Was it easy?
Color	3 (Red, Blue, Yellow)	Easy
Size	2 (Big, Small)	Harder

What We Learned

We can create Systems just by making Rules! Sorting helps us organize the world so we can count it.
