

# Module 05: Action — Moving Math

## Learning Objectives

1. Understand that you can **Do** Math with your body.
2. Learn about **Counting Actions** (Jumps, Claps, Steps).
3. Know that moving correctly is an Action Goal.

## Introduction: The Jumping Beans

Math isn't just for paper. It is for **Moving**!

- Captain Brain says: "Start Engines!"
- Captain Brain says: "Jump 3 times!"
- Body Agent goes: *Jump, Jump, Jump*.

If you only jumped 2 times, you didn't reach the Goal. You have to Count while you Move!

## Key Concepts

### 1. Counting Moves

Walking is just counting steps.

- "Take 5 steps forward."
- "Take 2 steps back." Your brain has to plan the number and your body has to do it.

### 2. Fast and Slow

Numbers can tell us about Speed too.

- **Fast Action:** Clap 10 times in 10 seconds.
- **Slow Action:** Clap 1 time in 10 seconds. The Number of actions changes, but the Time stays the same!

### 3. Geometry (Shapes)

You can make shapes with your body.

- Stretch wide like a **Star**.
- Curl up like a **Ball** (Circle).
- Stand straight like a **Pencil** (Line). You are a Shape Shifter!

### Activities

#### Activity 1: The Robot Walk

Pretend you are a robot. Commander says: "2 Steps Forward. 1 Step Left. 3 Jumps." Can you follow the program exactly? If you miscount, your robot crashes!

#### Activity 2: Number Hopscotch

Draw a hopscotch grid (1-10) with chalk. Throw a stone on a number (e.g., 7). Jump to that number. Count out loud as you jump: "1, 2, 3, 4, 5, 6, 7!"

### Summary

Action brings numbers to life. We use counting to control our bodies (dancing, running, jumping). When Brain and Body count together, we can move with precision!
