

Lab: The Skill Swap

Goal

To teach a family member something new.

What You Need

- Time (15 minutes).
- Patience!

Steps

1. Pick a Skill

Each person picks one small thing they are good at.

- **Kid:** Making a paper airplane.
- **Dad:** Whistling using fingers.
- **Mom:** Drawing a cat.

2. The Lesson

Take turns being the Teacher. Explain the steps clearly. Watch the Student try.

3. The Struggle

It might be hard for the student! If they make a mistake, help them **Update**. "Oh, fold it this way, not that way."

Discussion

- Was it harder to teach or to learn?
- How did it feel when you finally got it right?

- We are all teachers and students in this house.

What We Learned

Sharing skills makes the whole family system smarter.
