

Module 07: Communication — Faces and Feelings

Learning Objectives

1. Understand that we **Communicate** even without words.
2. Learn how to read **Faces** (Happy, Sad, Angry, Scared).
3. Know that your feelings are signals to other people.

Introduction: The Silent Language

Before babies can talk, they are masters of communication.

- **Cry:** "I need help!"
- **Smile:** "I like this!"
- **Rub Eyes:** "I am tired." We all speak this silent language every day. Your face is a billboard that tells people how you feel.

Key Concepts

1. The Signal (Sending)

You are a radio tower. You send signals with:

- **YOUR FACE** (Eyebrows, Mouth).
- **YOUR BODY** (Slumped shoulders, Jumping up and down).
- **YOUR VOICE** (Loud, Quiet, Whiny).

2. The Receiver (Listening)

To understand someone, you have to "tune in." Look at their face. Are they smiling? Are they frowning? This is called **Empathy**. It means feeling what they feel.

3. Mirror Neurons (The Copycats)

Inside your brain, you have special cells called Mirror Neurons. When you see someone smile -> Your brain practices smiling. When you see someone cry -> Your brain feels sad too. This is how we connect with each other.

Activities

Activity 1: Emotion Charades

Write emotions on cards (Happy, Sad, Angry, Surprised, Sleepy). Pick a card. Make the face (No talking!). Can your partner guess it? Try to do it with JUST your eyes!

Activity 2: The Mirror Game

Stand face-to-face with a partner. One person is the "Leader." Move slowly (Move arm, tilt head, make a face). The other person is the "Mirror." They must copy EXACTLY. Switch roles. How did it feel to be connected?

Summary

Words are important, but feelings are the foundation. By reading faces and sharing feelings, we build a bridge from one heart to another.
